

Finally...

Specialized Nutrition for Dogs Fighting Cancer

An integrated nutrition system to help with the effects of cancer and cancer treatments that may:

UNIQUE THREE-PART SYSTEM

- Human-grade, freeze-dried food.
- Wild-caught, purified Alaskan salmon oil.
- Supplement blend with mushrooms, plant extracts and amino acids.

EVIDENCE-BASED NUTRITION FOR DOGS WITH CANCER

A Unique Approach to Cancer Nutrition

- Developed by practicing PhD veterinarians specializing in oncology, tumor immunology, nutrition and cancer diets.
- Ingredients provided in small packages and mixed at mealtime to minimize oxidation from air, heat and light.
- Low-carb, high-fat, moderate-protein diet formulated to feed the dog, without feeding the cancer.
- Therapeutic levels of EPA and DHA omega-3 fatty acids.
- Based on research studies and clinical trials.

About Canine Biologics

Our company was founded to create specialized nutritional support for dogs with cancer. We are the only company that is 100% dedicated to this mission. We are currently formulating additional protein recipes and supplement blends to uniquely support dogs with specific forms of cancer. We are also creating low-carb treats for canine cancer patients.

Specialized Ingredients Shown to Help Canine Cancer Patients

Cordyceps Mushrooms	May decrease bone marrow suppression caused by chemotherapy.
Beta Glucans	Works synergistically with chemotherapy for some forms of cancer. Stimulates the immune system. May decrease pro-tumor T regulatory cells.
Silybin	Can decrease liver enzyme elevations for dogs undergoing chemotherapy for lymphoma. May enable dogs to complete a full course of treatment.
Genistein	Shown in some studies to sensitize lymphoma to the CHOP chemotherapy protocol increasing its efficacy.
Glutamine	Can minimize the side effects of chemotherapy such as esophagitis. May also reduce the onset, incidence and duration of mucositis and may reduce weight loss. Promotes GI healing and tolerance of chemotherapy.
Arginine	The amino acid arginine is often decreased in cancer patients. One study of dogs with lymphoma showed increased survival time by adding arginine to the diet. Arginine helps reduce inflammation and strengthens the immune system.
Omega-3 Fatty Acids	EPA and DHA omega-3 fatty acids help reduce inflammation, strengthen the immune system and improve neuromuscular function.

100% Human-grade Food Ingredients

Chicken, brown rice, green beans, sweet potatoes and flax seed meal.

Nutritional Flexibility

Because ingredients in our nutrition system are combined at mealtime, pet parents can modulate the fat content with veterinarian guidance. For dogs with certain conditions, phosphorus and sodium levels can also be customized with the addition of specific home-cooked vegetables, rice, etc. Please consult a veterinary nutritionist for guidance. When fed as directed, the nutrition profile is 48% protein, 36% fat, 16% carbohydrate, 5% fiber (11% net carbs).

Nutrition Plans & Starter Kits

Canine Biologics' Integrated Nutrition System is available as a Starter Kit or customized meal plans. Starter Kits contain enough food, supplement mix and salmon oil to try with a dog. A Starter Kit should last a 50-pound dog approximately 6-8 days. To build a nutrition plan for your dog, please visit our website.
